Unit 2: Inclined Plane Dynamics & Friction

TutorTech Online Tutoring Learning Management System

Date: October 2026 | tutortech.com

Experiment Objectives: Measure coefficient of static vs kinetic friction.

1. Set incline angle to 25 degrees with a 500g wooden block.

2. Record normal force Fn = mg cos(theta) and parallel force Fp = mg sin(theta).

3. Plot friction graph and calculate slope.
